

Superb seedlings with Hortiblock trays

Put the latest innovation in horticulture to work for you. Hortiblock trays are rugged, mirror-smooth containers that resist root penetration. The result? Improved plant growth, higher yields and a long service life for each tray. It all adds up to better economics for your business.

Beaver Plastics pioneered the proprietary molding process that yields these high quality trays. We have over 30 years' experience producing the exceptional Styrobloc® container for reforestation nurseries. Now we're introducing the Hortiblock tray for vegetable and floral nurseries.

Simply the best

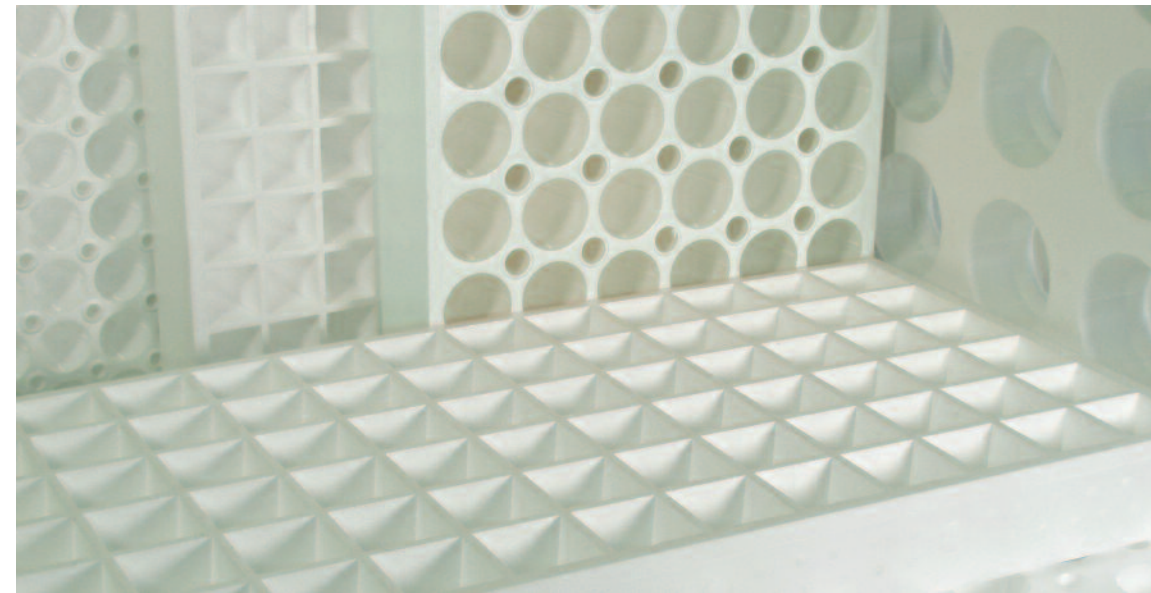

Start your new nursery with lightweight, white, insulated Hortiblock trays. Replace your inefficient old trays with sturdy, reusable and cost-effective Hortiblock trays.

Whatever your application, Beaver Plastics' Hortiblock trays give growers a competitive advantage. You'll stay ahead with:

- **Healthier plants.** Significant ventilation and insulation features built into each tray promote improved plant growth.
- **Durability.** Hortiblock trays are root resistant allowing you to use the trays for repeated crop cycles. They're easy to clean and sterilize.
- **Easy handling.** Hortiblock trays are your best choice for manual or automated handling of seedlings.
- **Flexibility.** Hortiblock trays come in a full range of sizes in your choice of round or square cavity models. If you have novel requirements, we'll produce custom molds quickly and economically.

Smiling with success

A near-perfect crop of pepper seedlings raised in the new Hortiblock 242/26-ml tray.

"I've never had a tray of this quality. Hortiblock trays represent a real advance for horticulture," says well-known industry expert Dr. Dick Barrett. Dick is seen here with David Wilson of Classie Plants, Palmetto, FL.

The price is right!
